Jules Henri Poincaré (/ p w ˈ ɪ f k ɛ ˈ ɛ ː r e ɛ ː /; French: [ɛˈʁfɛːi pwɛː]fkaɛːe) (); 29 April 1854 – 17 July 1912) was a French mathematician, theoretical physicist, engineer, and philosopher of science. He is often described as a polymath, and in mathematics as "The Last Universalist," since he excelled in all fields of the discipline as it existed during his lifetime.

The classification of closed surfaces gives an affirmative answer to the analogous question in two dimensions. For dimensions greater than three, one can pose the Generalized Poincaré conjecture: is a homotopy  $n$ -sphere homeomorphic to the  $n$ -sphere? A stronger assumption is necessary; in dimensions four and higher there are simply-connected, closed manifolds which are not homotopy equivalent to ...

I. INTRODUCTION The simple double pendulum consisting of two point masses attached by massless rods and free to rotate in a plane is one of the simplest dynamical systems to exhibit chaos.<sup>1,3</sup> It is also a prototypical system for demonstrating the Lagrangian and Hamiltonian approaches

Historique Formulation. La conjecture fut formulée pour la première fois par Henri Poincaré en 1904, et s'énonce ainsi : « Soit une variété compacte  $V$  simplement connexe, à 3 dimensions, sans bord. Alors  $V$  est homéomorphe à une hypersphère de dimension 3.. Poincaré ajouta, avec beaucoup de clairvoyance, un commentaire : « mais cette question nous entraînerait trop loin ».

The time-without-time foundation of classical physics entails a relatively small adjustment to our conceptions,

but is likely to have a profound effect in a quantum theory of the universe.

The classical theory of chemical reactions can be understood in terms of diffusive barrier crossing, where the rate of a reaction is determined by the inverse of the mean first passage time (FPT) to cross a free energy barrier.
