Difference between WS2801, WS2811 and WS2812. Before we start, we should probably identify the differences between the WS2801, WS2811 and WS2812 based strips (also called "strands"). Most projects and descriptions out there discuss these sometimes mixed, and for one who dives into LED strips for the first time, these model numbers might be confusing.

Tweaking4All.com - Arduino - Controlling a WS2812 LED

Wire, the library available in the Arduino APIs to communicate with devices on the I2C bus, as of the 022 version of the Arduino IDE, by default enable the internal pullups of the ATMEGA microcontroller. As all 16MHz ATMEGA runs at 5V this means that with pullups enabled signals will have a 5 volt as logic level.

How to disable internal Arduino ATMEGA pullups on SDA and

The FLiR Dev Kit includes a breakout as well as a Lepton® longwave infrared (LWIR) imager. With this kit you will be able to bring FLiR's thermal imaging reliability and power to your Arduino, Raspberry Pi, or any ARM based development tool all in an easy to access breadboard friendly package.
