Materials Science in Semiconductor Processing

Global consumption of 3D printing systems, printing materials, parts, software, and related services amounted to over \$13 billion in 2016. Also, worldwide spending on 3D printing is expected to have an annual growth rate of 22.3% in the next few years, and \$29 billion of revenues are expected by 2020.

Mechanical characterization of 3D-printed polymers

We provide materials & products testing, analysis & characterization to customers across a wide range of industries - providing solutions, not just numbers.

Materials Testing, Analysis & Characterization Laboratory

GC analysis is a widely used technique for the field-based analysis of organic compounds present in a variety of matrices such as water, soil, soil gas, and ambient air.

National Key Facts and Figures in the United States. Each year, EPA produces a report called Advancing Sustainable Materials Management: Fact Sheet, formerly called Municipal Solid Waste in the United States: Facts and Figures.

Advancing Sustainable Materials Management: Facts and

Some applications of cryogenics: Nuclear magnetic resonance (NMR) is one of the most common methods to determine the physical and chemical properties of atoms by detecting the radio frequency absorbed and subsequent relaxation of nuclei in a magnetic field. This is one of the most commonly used characterization techniques and has applications in numerous fields.
